PROFESSIONAL SUMMARY

Computer Science undergraduate at NSBM Green University with hands-on experience developing full-stack web and mobile applications using Java, Spring Boot, React, Next.js, TypeScript, PostgreSQL, MySQL, Flutter, and Firebase. Experienced in authentication and authorization, RESTful APIs, database-driven applications, responsive interfaces, secure application workflows, and team-based software development. Strong practical exposure through individual and group projects, with leadership responsibilities in collaborative development. Seeking a software engineering internship to apply software development, problem-solving, and software engineering skills in a professional environment.

EDUCATION

BSc (Hons) in Computer Science | 2025 - 2028 (Expected)

NSBM Green University, Sri Lanka

Relevant coursework: Object-Oriented Programming, Database Systems, Data Structures and Algorithms, Web Technologies, Development of Enterprise Applications, Cybersecurity Fundamentals

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), TypeScript, Python, PHP, SQL

Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Framer Motion, Canvas API, Flutter

Backend: Spring Boot, ASP.NET Core, RESTful APIs, JWT Authentication, Spring Security, Entity Framework Core, Prisma

Databases: PostgreSQL, MySQL, MongoDB

Security & Cloud: Authentication and Authorization, RBAC, AWS fundamentals, Docker, Application Security

Tools: Git, GitHub, Postman, VS Code, IntelliJ IDEA, Figma, UploadThing

SELECTED PROJECTS

CampusX - Student Marketplace & Dorm Discovery Platform *Solo Project | 2026 | Next.js 15, React, TypeScript, Tailwind CSS, Prisma, PostgreSQL, JWT*

- Built a full-stack student platform combining marketplace listings and dorm discovery with search, filtering, pagination, saved listings, notifications, reporting, image uploads, and direct messaging workflows.
- Secured authentication with HttpOnly cookies, role-based authorization, bcrypt password hashing, input validation, ownership checks, and protected application routes.
- Designed PostgreSQL data models with Prisma for users, listings, dorms, conversations, messages, saved listings, notifications, and reports, using relational constraints and indexed queries.

TalentFlowOS - Recruitment & Talent Management Platform *Team Project | Team Leader - Authentication, System Integration & Infrastructure | 2026 | ASP.NET Core, C#, React, TypeScript, EF Core, PostgreSQL, JWT*

- Contributed to a multi-role recruitment platform supporting candidates, recruiters, hiring managers, and administrators, while coordinating development and feature integration as team leader.
- Implemented authentication workflows for registration, email verification, login, password reset, and token-based access control using JWT, BCrypt, dependency injection, and role-based authorization.
- Worked across Clean Architecture/layered components, PostgreSQL persistence, API integration, exception handling, and automated unit/integration test coverage for authentication workflows.

Task Management System - Full-Stack Enterprise Web Application *Team Project | Team Leader - Authentication & Security | 2025 | Java 17, Spring Boot, Spring Security, React, MySQL, JWT*

- Led a six-member development team through feature planning, implementation, integration, and GitHub-based collaboration for a full-stack task management platform.
- Configured JWT authentication and authorization with Spring Security, BCrypt password hashing, stateless sessions, protected API routes, role-based admin access, and React authentication state management.
- Contributed login and registration interfaces, protected frontend routing, API integration, task filtering/search workflows, and integration/debugging across the React and Spring Boot application.

Sentinel Defense - Browser Tower Defense Game *Solo Project | 2026 | JavaScript (ES6+), HTML5 Canvas, CSS3, Web Audio API, LocalStorage*

- Created a browser-based tower defense game with 10 progressive waves, 4 tower types, and 5 enemy variants using modular ES6 architecture and a requestAnimationFrame game loop.
- Developed waypoint-based enemy movement, targeting modes, projectile and collision mechanics, area-of-effect damage, status effects, audio synthesis, visual effects, pause/victory/defeat states, and persistent save data.
- Added LocalStorage save/load with structure and checksum validation and responsive layouts for desktop, tablet, and mobile screens.

PetCare+ - Smart Pet Health, Veterinary Care & Pet Adoption Mobile Application *Team Project | Team Leader | 2026 | Flutter, Dart, Firebase Auth, Cloud Firestore, Clean Architecture*

- Led feature integration for a Flutter mobile application connecting pet owners, veterinary staff, and adoption providers across pet management, health, notifications, queue, and adoption workflows.
- Implemented Firebase authentication for email/password registration and login, Google Sign-In, password reset, Firestore owner-profile creation, error handling, and authentication navigation.
- Built Firestore-backed notifications and pet-adoption workflows using repository abstractions, reactive streams, role/ownership security rules, provider-based state management, and widget tests.

CropFlow - Agricultural Supply-Chain Platform *Solo Project | 2026 | Java, Spring Boot, Spring Security, PostgreSQL, JPA, Flyway, JWT, Docker*

- Designed and developed a modular backend for a farm-to-market workflow connecting farmers, buyers, and transporters through marketplace and order-oriented domain processes.
- Engineered secure authentication using Argon2 password hashing, email verification, JWT access tokens, rotating hashed refresh tokens in HttpOnly cookies, CSRF protection, password reset, logout revocation, and RBAC.
- Built marketplace listing workflows with ownership authorization, validation, state transitions, search, pagination, sorting, PostgreSQL indexes, and Spring Boot integration tests for security and authorization scenarios.

Spotify Mobile App - Spotify-Inspired Flutter UI *Solo Project | 2026 | Flutter, Dart, Material UI, flutter_svg*

- Created a Spotify-inspired mobile interface in Flutter with splash, onboarding, and theme-selection screens using reusable UI components and centralized navigation.
- Built centralized light/dark theme configuration, color management, typography, asset organization, and reusable buttons while structuring the application into presentation, core configuration, and shared widget layers.

CERTIFICATIONS & TRAINING

- AWS Cloud Practitioner Essentials - Apr 2026
- Getting Started with DevOps on AWS - Jun 2026
- Customizing and Evaluating LLMs Using Amazon SageMaker JumpStart - AWS - Jun 2026
- Introduction to MongoDB - May 2026
- Agile Scrum Master - May 2026
- AI Fluency: Framework & Foundations - Anthropic - May 2026
- Claude 101 - Anthropic - Apr 2026
- Claude Code 101 - Anthropic - Apr 2026
- Siemens Mobility - Project Manager Job Simulation - Forage - Jun 2026
- EF SET English Certificate - C1 Advanced - Apr 2026

LANGUAGES

English - C1 Advanced (EF SET Certified) | Sinhala - Native
